### Technical data

#### Functional data

**Fluid**

Cold and warm water, water with glycol up to max. 50% vol.

**Fluid temperature**

-20...120°C

**Flow characteristic**

0...100% opening angle: S-form; 0...60% opening angle: equal percentage

**Flow characteristic note**

For butterfly valve actuator combinations with the PR actuator, the flow characteristic can be set to linear using the Belimo Assistant App

**Leakage rate**

tight, leakage rate A (EN 12266-1)

**Angle of rotation**

90°

**Installation position**

upright to horizontal (in relation to the stem)

**Suitable connection flange**

In accordance with ISO 7005-1 and EN 1092-1
In accordance with ISO 7005-2 and EN 1092-2
In accordance with DIN 2641 and DIN 2642

**Servicing**

maintenance-free

#### Materials

**Housing**

EN-GJS-400-15 (GGG 40), polyester-powder coating

**Closing element**

stainless steel (1.4308)

**Stem**

stainless steel AISI 420 (1.4021)

**Stem seal**

EPDM O-ring

**Stem bearing**

Bronze, steel, PTFE

**Seat**

EPDM

---

### Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.
- The damper must be opened and closed slowly in order to avoid hydraulic shocks in the pipe system.
- The valve is not allowed to be operated without actuator or worm gear while flow is in the pipe. Without actuator or worm gear, the valve could close and cause damage (water hammer).
Product features

Mode of operation
The butterfly valve is opened or closed completely by an open/close rotary actuator. Continuous rotary actuators are connected by a commercially available controller and move the valve to any position desired. The valve disk made of stainless steel is pressed into the soft-sealing EPDM seat by a rotary movement and ensures leakage rate A (tight). The pressure losses are slight in the open position and the kv value is at a maximum.

Manual override
Manual throttling or isolation can be carried out with a worm gear (see «Accessories»). The worm gear with position indication is steplessly adjustable (self-locking).

Accessories

Installation notes

Recommended installation positions
The butterfly valves may be mounted upright to horizontal. The butterfly valves may not be installed in a hanging position i.e. with the spindle pointing downwards.

Water quality requirements
The water quality requirements specified in VDI 2035 must be adhered to.

Servicing
Butterfly valves and rotary actuators are maintenance-free.
Before any service work on the final controlling device is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).
The system must not be returned to service until the butterfly valve and the rotary actuator have been reassembled correctly in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.
To avoid a torque increase during off season shut down, exercise the butterfly valve (full open and close) at least once a month.

Flow setting
The Belimo butterfly valves have an approximate equal percentage characteristic curve between 0...60% opening angle.
The following table shows the respective kv values in relation to the opening angle (%).

<table>
<thead>
